

**SYSTEM AND METHOD FOR MANAGING MESSAGES AND  
ANNOTATIONS PRESENTED IN A USER INTERFACE**

**Abstract of the Disclosure**

16           A user may select an error message presented in a graphic  
user interface and bring up a word processor by which text  
describing the error and its solution may be entered. This is  
saved, and the next time the error is encountered, the saved  
annotation is available for presentation to and further editing  
21 by the user. In this manner, the developer may continually  
improve the quality and usefulness of the error messages.
